

Activity 5 - Part 1

Instructions:

1. **Create a React App and Install Packages**
 - o Create a Vite React project.
 - o Install axios, react-router-dom, and Tailwind CSS.
2. **Set Up Routing with React Router**
 - o Create pages for Home, Users, Posts, Post Details, and About.
 - o Use BrowserRouter, Routes, Route, Link, and/or NavLink.
3. **Use fetch() on the Users Page**
 - o Fetch users from <https://jsonplaceholder.typicode.com/users>.
 - o Display each user's name, email, city, and company name.
 - o Include loading and error states while fetching data.
4. **Use axios on Posts and Post Details**
 - o Fetch posts from <https://jsonplaceholder.typicode.com/posts> and display at least 10 posts.
 - o Each post should have a View Details link that navigates to `/posts/:id`.
 - o Use useParams() on the Post Details page to display the post title and full body.

Activity 5 - Part 2

1. **Style with Tailwind CSS**

- o Apply Tailwind utility classes for spacing, colors, typography, and layout.
- o Use card-style UI for users and posts.
- o Make the design responsive and mobile-friendly.

2. **Add a Reusable Navigation Bar**

- o Create a Navbar component that is visible across all routes.
- o Add links for Home, Users, Posts, and About.
- o Use NavLink to highlight the active page.

3. **Add Loading, Error, and Empty States**

- o Show messages such as Loading users... or Loading posts... while waiting for the API.
- o Show a friendly error message if an API request fails.
- o Show No results found when search results or filtered lists are empty.

4. **Improve the User Experience**

- o Add at least two enhancements: search, post limit, Back to Posts button, hover effects, or card UI.
- o Keep the interface clean, consistent, and easy to navigate using Tailwind CSS.
